

Firefighter Rescue Scenario

A firefighter has escaped a hostile situation by diving through a window. He has some injuries and will not be able to rescue himself using the ladder or other means. Assume that the fire has not yet been extinguished.

- How will you get him down?
- What safety considerations must be observed during the rescue operations?
- What hazards appear to be present?
- What other factors should be considered at this event; Where is his partner?
- What are the command actions/reactions to this incident?
- Develop at least 2 rescue plans for him in the event conditions change and you are unable to use your primary plan.
