

Safe Apparatus Positioning

Don't make your apparatus part of the problem.
-Review positioning of apparatus at incident scenes

- What would you do if a fire went from offensive to defensive and the apparatus was positioned too close to the building?
- What personnel safety considerations do you have before moving the unit?
- How can this be prevented in the first place?

Discuss SOG's on positioning apparatus

- Remember uphill and upwind
- Use of the apparatus as a shield from traffic

**TAKE TIME TO SPOT CORRECTLY AND SAFELY ACCORDING TO APPARATUS
FUNCTION AND CREW SAFETY**

[Review Weekly Fire Drill Volume 1-3 Roadway Operational Safety](#)
