

The National Volunteer Fire Council Foundation's "Cost Savings Calculator".

The National Volunteer Fire Council Foundation's Cost-Savings Calculator is a powerful new analytical tool that helps volunteer and combination fire departments show the true value of their services to the community. Armed with these figures, not only can fire companies educate elected officials on the value their departments bring to the community, they can also show how many resources would need to be borne by local and regional governments in their absence. Click on: <http://www.nvfc.org/calculator/main.html>

There is also a Power Point Presentation template that can be downloaded and modified for individual department use.
